Yes, documented; No, affirmative absence; NR, Not reported (presence or absence unclear). Partly means: code, spreadsheet or incomplete rules; enforcement, some configurations or incomplete answer checks; breaks, overall-only or qualitative checks; quotations, semantic judging without occurrence/integrity checks; audit, retained responses without a verifiable source bundle; agent, enabled browsing or retrieval without demonstrated agent tool calls; reference, limited re-review, historical independent teams or text-relevance review; registry/protocol, compressed or restricted delivery. Structured prompting alone is not enforced rules. Registry/protocol includes SAPs and available records; a registration number alone does not qualify. This study gave both compared arms identical inputs; other matched model/workflow comparisons also used identical underlying sources (see curated evidence notes). a, Compressed ancillary records; overall-only checks. b, Post hoc Excel derivation; six development trials. c, Prompt rules. d, RoB 2 cohort; protocols when available. e, Masked panel; actual browsing unmeasured. f, One trial, 38 runs. g, Retrieval and retained edits. h, Post hoc support judging. i, ROBINS-I; selected concordant references. j, Recorded overrides permitted; none in 510 domains; disputed-cell adjudication. k, RobotReviewer used RoB 1; its blinded panel judged text relevance. Reference callouts resolve in the manuscript bibliography. Full cell evidence and definitions: prior-work-comparison-notes.md.
