105 benchmark trials; 3 unsupported designs excluded
102 trials from 16 reviews; identical supplied trial files
Same Sonnet model; one run per arm
ARBITER complete workflow
Guidance, tools and rule application
Unassisted comparator
Minimal task and format prompt
Paired arm outputs: 102 trials × five domains = 510 cells
Full-cohort comparison: all 510 cells
Each expert independently records ratings
and answers before viewing labels; no AI
Conditional primary endpoint: 80 cells
where arm labels differ; experts then
choose among randomly ordered labels
Separate expert references
Full cohort retained
60 agreed choices
53 favour ARBITER
