Table 4. ARBITER combines rule enforcement, source verification and blinded adjudication

Study	Rules in code	Rules enforced during assessment	Quotations verified	Audit file	Agent with tools	Independent reference or adjudication	Input parity
Eisele-Metzger 2025, Res Synth Methods (Claude 2) [a]	Not reported	No	Not reported	Not reported	No	Partly	No
Huang 2025, J Med Internet Res [b]	Partly	No	Not reported	Not reported	Not reported	Yes	Partly
Lai 2026, J Med Internet Res [c]	Not reported	No	Not reported	Not reported	Not reported	Partly	Not reported
Nyrhi 2026, EBioMedicine [d]	Not reported	No	Not reported	Not reported	No	No	Partly
Gandhi 2026, PLoS One [e]	Not reported	No	Not reported	Not reported	Partly	Yes	No
Choi 2026, J Evid-Based Pract [f]	Yes	Partly	Not reported	Not reported	Partly	Yes	Not reported
Hevia 2025, ROBoto2, EMNLP demos [g]	Yes	Partly	Not reported	Partly	Partly	Yes	Not reported
Liang 2026, JMIR AI [h]	Not reported	No	Partly	Partly	Partly	No	Not reported
Saadi 2026, BMJ Digit Health AI [i]	Not reported	No	Not reported	Not reported	Partly	Partly	No
This study (ARBITER) [j]	Yes	Yes	Yes	Yes	Yes	Yes	Yes

Yes, Partly, No and Not reported follow the source evidence; No denotes demonstrated absence. Quotations verified means checked against a stored source. Input parity concerns registry/protocol access across comparison arms. Eisele-Metzger 2025, Res Synth Methods (Claude 2): 10.1017/rsm.2025.12; Huang 2025, J Med Internet Res: 10.2196/70450; Lai 2026, J Med Internet Res: 10.2196/84915; Nyrhi 2026, EBioMedicine: 10.1016/j.ebiom.2026.106238; Gandhi 2026, PLoS One: 10.1371/journal.pone.0353155; Choi 2026, J Evid-Based Pract: 10.63528/jebp.2026.00011; Hevia 2025, ROBoto2, EMNLP demos: 10.18653/v1/2025.emnlp-demos.2; Liang 2026, JMIR AI: 10.2196/93761; Saadi 2026, BMJ Digit Health AI: 10.1136/bmjdh-2026-000034 a. Only overall-rule breaks were counted; discrepancy review was unblinded and limited. b. Excel derivation was post hoc; 46 trials include six prompt-development trials. c. Rules were in the prompt; published-label corrections were sensitivity analyses. d. RoB 2 cohort only; protocols were supplied when available, with a model exception. e. A masked panel re-rated all trials; browsing was enabled but actual registry retrieval was unverified. f. One trial, 38 runs; coded checks found tool inconsistencies and three expert transcription errors. g. Dataset: 521 reports; manual evaluation subset: 245. Retrieved passages and edits are not source verification. h. Post hoc LLM support judgments and JSON records do not establish locked-source quote checking. i. ROBINS-I: 171 nonrandomised studies; only concordant human and repeat-consistent model ratings enter accuracy. j. ARBITER permits recorded overrides; none occurred in the 510 Sonnet domains. Adjudication covers disputed cells.
